

## Tenneo LMS V8.3: The Stabilizer for the Future of Learning Excellence

Following the success of V8.2, we are excited to announce Tenneo LMS V8.3, a strategic release dedicated to enhancing the platform's core functionalities. This version focuses on robust improvements in user engagement, security, system performance, and key features, ensuring our LMS remains a reliable choice for learning excellence.

### 1. Enhanced Notifications for Better User Engagement

To ensure seamless communication and boost learner engagement, V8.3 will introduce WhatsApp as a new communication channel alongside revamped SMS notifications. These enhancements will enable learners to receive timely, informative updates. This upgrade aims to foster a more engaging and responsive learning environment for everyone involved.

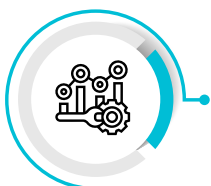

### 2. Granular Reporting for Deeper Learning Insights

V8.3 introduces several key updates to enhance the reporting functionality and overall user experience. The newly revamped reporting features provide admins with highly dynamic and granular insights into learner engagement and progress. These enhancements allow organizations to further drill down into specific data points, gaining a much deeper understanding of the learning progress of individuals as well as training groups. This level of detail reporting analytics enables more targeted interventions, making it easier to identify learning gaps and drive performance.

### 3. Amplified Security for Robust Protection

Security remains a top priority in V8.3, ensuring that your learners' data is safeguarded with the latest security protocols and new compliances in GDPR. These measures further stabilize the platform's security frameworks and L&D leaders will not have to worry about data privacy. With enhanced endpoint authorization and Keycloak authentication, they can be assured that their sensitive data is well-protected against breaches.

### 4. Optimized System for Improved Efficiency

In V8.3, we are focused on further enhancing the overall efficiency of the platform. With optimized Learning Performance Platform (LPP), users will experience faster load times, reduced disruptions, and a more seamless workflow. This phase will ensure that the platform operates with greater reliability and efficiency, setting a solid foundation for future updates.

### 5. Better Performance for Faster Operation

In V8.3, we are prioritizing performance improvement. By upgrading to Cordova's latest version, Cordova 13.0, we are ensuring the integration of the latest features and improvements from the Cordova ecosystem to make the platform more reliable. These improvements will translate to faster response time and lesser system downtime. V8.3 will enable learners to engage with the platform without interruptions and focus on the core tasks of learning and growing.

Our commitment to excellence drives the enhancements in Tenneo LMS V8.3, solidifying platform's stability, security, and performance. With V8.3, we reinforce our dedication to providing a high-quality learning experience while laying the groundwork for V8.4, our most ambitious release yet!
